

Quality Principles

Highest quality standards ensure enduring and successful partnerships with our customers

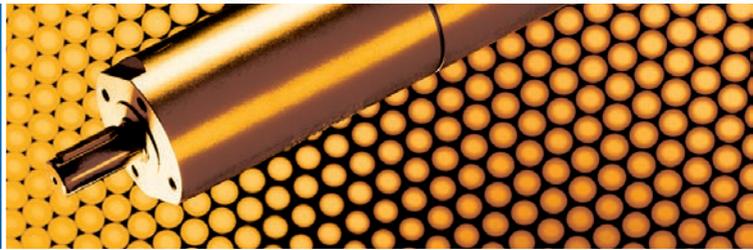

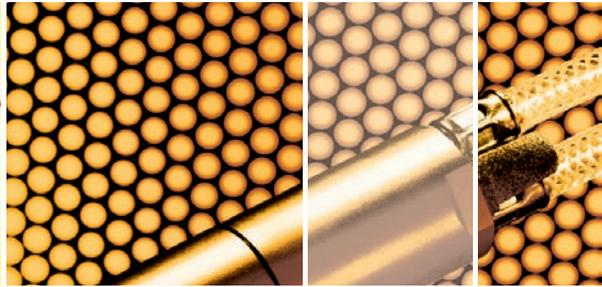

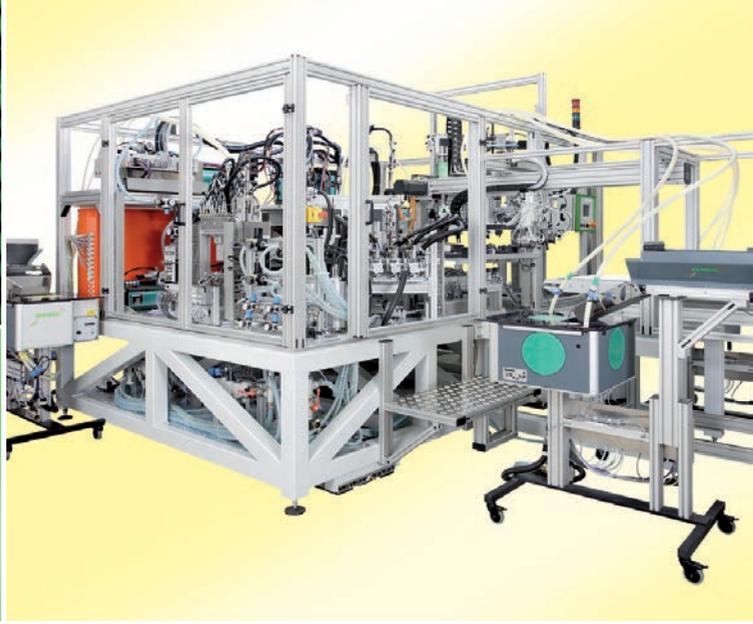

DEPRAG

High quality products

satisfied customers

High quality screwdriving technology, automation, air motors and air tools are the basis of our customer satisfaction.

DEPRAG

Our engineers, technicians and specialists are passionate about developing products.

Satisfied employees are a prerequisite for top quality work.

Each DEPRAG employee guarantees optimum quality with firm conviction.

Economic success and solid growth are the foundation stones of an efficient partnership with our customers in international markets.

Long term customer relationships make for a healthy company with a secure and attractive working environment.

We do not make short term decisions, we consider the long term effects.

Preamble

The following quality principles are in direct correlation with our general company principles. According to these principles we work on the development of permanent solutions for the production and assembly tasks of our customers with a long term perspective. This effective company policy ensures the economic success of our company and the attractiveness of employees' jobs.

As the following principles, these guidelines apply to all employees, the management and the members of all companies in the DEPRAG group (status 01.2015):

- | | |
|--|----------------|
| ■ DEPRAG SCHULZ GMBH u. CO. | Germany |
| ■ DEPRAG Assembly Technologies Co., Ltd. | China |
| ■ DEPRAG S.A.R.L. | France |
| ■ DEPRAG Ltd. | Great Britain |
| ■ DEPRAG Scandinavia AB | Sweden |
| ■ DEPRAG CZ a.s. | Czech Republic |
| ■ DEPRAG, INC. | USA |

1. Quality = Customer satisfaction

The top priorities in our company are customer satisfaction and environmental awareness. We are committed to the adherence to customer specific requirements.

Our aim:

Prompt, service-oriented fulfilment of customer requests with products of the highest quality at an attractive price.

2. Quality = Comprehensive

For us quality means doing things right first time. Processing quality reduces costs and increases efficiency. The customer sets the bar. Our customers' opinion of our product quality is crucial.

Our aim:

To ensure our customers long term economic success with comprehensive, professional, worldwide service.

3. Quality = Employee satisfaction

It takes outstanding employees to realise innovative solutions. We place emphasis on comprehensive basic schooling, continual technical and personal training as well as the accumulation of long term experience. Cooperative and integrative leadership supports employees in the creative development and effective implementation of new ideas.

Our aim:

To create optimal working conditions and a constructive motivating environment for all employees. Employee enthusiasm thereby becomes customer enthusiasm.

4. Who is responsible for quality?

Every employee contributes to the realisation of our goals regarding quality and the environment.

Whoever identifies a hazard and does not have it within his power to deal with it, is obliged to inform his superiors immediately.

5. We only deliver exemplary products

Top quality products and services are the most important fundamentals for the success of our company. For us quality is about more than just correct function, reliability, long life span and accuracy of a product. Highest quality is reached by quality assured processing in all areas of a company.

6. Problem solving

As a team we strive to find creative solutions and exploit synergies. We take the good ideas of our employees, the challenges of our customers or the recommendations of our suppliers and other business partners and invest this knowledge in improvements to products and processes.

Our aim:

Continued enhancement of the performance and quality of our products and services.

7. Prevention is better than cure

The later errors are found in products or services, the higher the cost of the remedy and the greater the loss of reputation. Prevention is the systematic way to quality.

Through an interdepartmental suggestion system, every employee can actively participate in the development of operational procedures.

Our aim:

Improvements to product quality, working processes, work safety and service, cost saving and a responsible handling of resources.

8. Environmental responsibility

Part of our environmental policy is to comply with the legal specifications in regards to health and safety and environmental protection and continuously improve our performance in these areas. A continued review of the risks of present activities, regular monitoring as well as improved communication are integral parts of our active environmental policy. The considerate handling of resources, energy and raw materials, is an important component of our environmental and social responsibility.

This applies to products, production and our own performance.

9. Documentation of processes

We have implemented a certified management system in order to further ensure top quality products and services for our customers and at the same time to guarantee environmental sustainability. This system is based on the standard ISO 9001:2008.

10. Supplier partnership

The quality of our products and the influence on the environment depends on our purchased parts. For this reason we demand both top quality, corresponding to customer requirements, and environmental awareness from our suppliers.

We support our suppliers in the pursuit of our common goals.
